

## Software Test Engineer

EagleView is looking for an experienced test engineer with strong troubleshooting and testing skills. This individual will analyze, design, execute and document the specific software test plans and strategies. In cooperation with engineering and product management, implement and apply test processes, testing practices and test tools used in troubleshooting, investigating, and identifying issues with software. Work closely with internal customers to review requirements, participate in delivery process, drive end-to-end product life-cycle testing and participate at all levels of product specification and design. We offer a competitive compensation and benefits package and the opportunity to grow your career with a rapidly growing national technology firm.

### **Essential Duties and Responsibilities:**

- Preparation of test plans and test documents. Create test strategies, test plans, test cases, regression testing, test scripts and test reports. Track testing status and provide defect/bug reports. Identify, manage and evaluate the documentation and deliverables required for each product to be tested.
- Interface and interact with engineering team to resolve problems identified in product testing and quality assurance regarding software correctness and compliance with established product use/test cases and configuration rules.
- Work with developers to translate business requirements and functional specifications into test plans and test scripts.
- Responsible for performing User Acceptance Testing (UAT) and quality assurance activities associated for various websites and applications.
- Responsible for performing Functional Testing activities associated for various websites and applications.

### **Required Skills:**

- Software QA experience in Windows/.NET environment
- 5 or more years in related QA experience
- 2 or more years experience in test automation
- 2 or more years experience testing web applications
- 1 or more years of C# experience
- Demonstrates ability to efficiently design, implement and execute tests
- Some experience working with relational databases
- Working knowledge of Agile software development techniques
- Experience with defect, test case, and source code management tools
- Ability to work independently with incomplete requirements

### **Desired Skills:**

- Experience working with SharePoint applications
- Experience writing SQL queries and relational databases
- Familiarity with VSTS 2010

Location: Bothell Canyon Park
