# EagleView Inform™ Essentials+
## Design and install solar systems based on complete, accurate exterior data

EagleView Inform Essentials+ delivers a detailed property report with precise and consistent measurements and 3D models at about ¼ the cost of a single site visit[1].

The remote property measurements in the Inform Essentials+ report are calculated from multi-angle, high definition aerial imagery, providing far greater accuracy than measurements taken manually on the roof. Data is delivered in multiple formats; a convenient PDF, 3D models, high-definition imagery, and digital files that can be imported directly into popular design tools like AutoCAD. When you create proposals and plan sets based on precise, automated measurements you can get it right the first time, eliminating costly change orders, reducing project times, and inspiring customer confidence.

### Increase Operational Efficiency
Streamline your projects from proposal to design to install. You'll be amazed when you see how much time and money can be saved over manual processes.
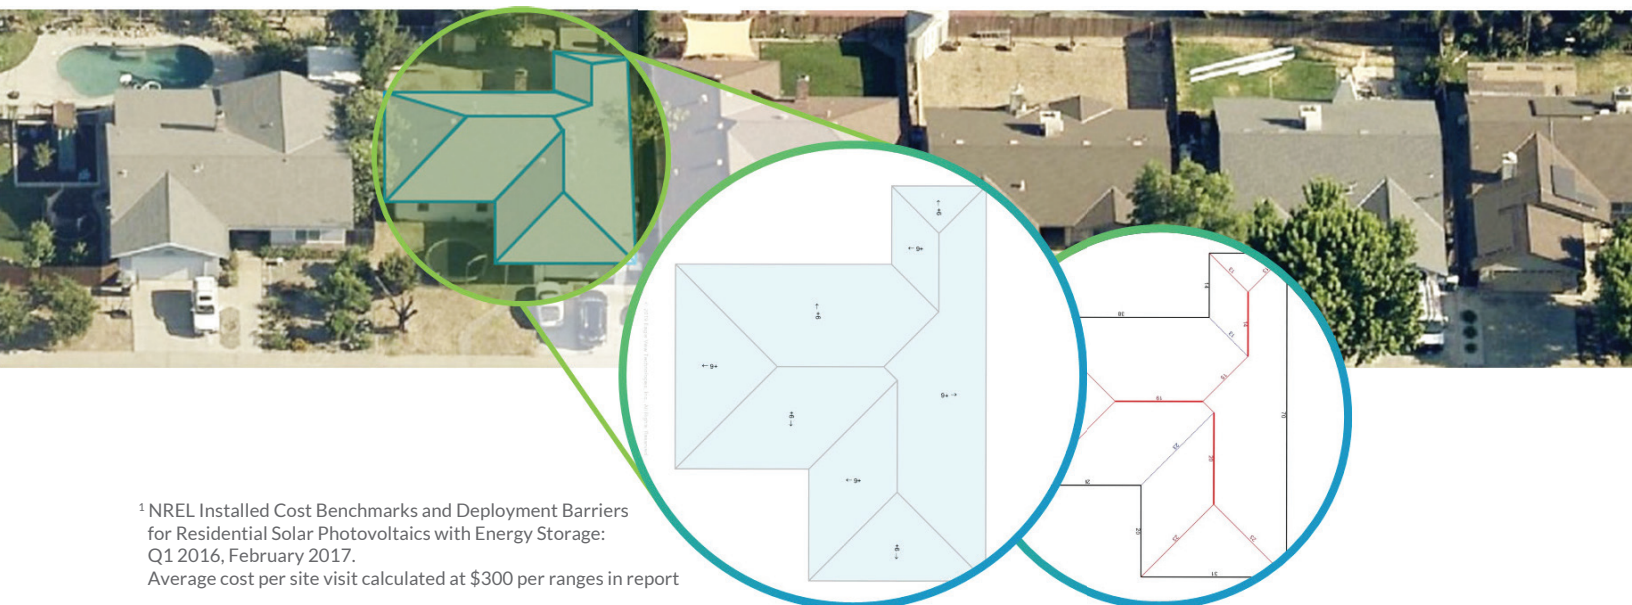

### Replace Guesswork with Accurate Data
Design using precise measurements and high resolution imagery, instead of drawing over 2D satellite images and estimating measurements and the size and location of obstructions.

### Compete Better and Grow
Gain a competitive edge by completing projects faster and within budget, delighting customers so you can focus on winning new business.

Average cost per site visit calculated at $300 per ranges in report

# What you get from Inform Essentials+

Your Inform Essentials+ report gives you all the exterior data you need to design and install a photovoltaic (PV) system with accuracy and confidence.

*Report pages consolidated. Image does not represent the first page of a report.*

\* To ensure optimal panel placement, order our newest report, EagleView Inform™ Advanced. It provides all the data in Inform Essentials+ and includes solar access values from sophisticated shading analysis to help you design PV systems for maximum energy output. Please refer to the website or contact an EagleView representative for area availability.

| | Essentials+ |
|---|:---:|
| High-resolution EagleView aerial imagery | ● |
| Roof geometry measures with 3D models | ● |
| Roof pitch | ● |
| Line classifications | ● |
| Roof facets | ● |
| Azimuth | ● |
| 2D roof obstruction data | ● |
| Shading analysis for optimal panel placement and system production\* | |
| Suggested list price (USD) | $50 |

Additional features:

- Export digital files (DXF, JSON, XML, PDF) to popular design programs, including AutoCAD, to make the design process faster and more efficient
- Use convenient PDF reports that include rich visualizations and property measurements when creating proposals and customer presentations
- Order reports and access property data on-the-go with the mobile app, available for both iOS and Android
