EagleView Imagery for Experience Builder Release Notes

Version 1.4 initial release

- Various bug fixes

Version 1.3 initial release

- Updated Eagleview logo and branding

Version 1.2 initial release

- Various bug fixes

Version 1.1 initial release

- Various bug fixes

Version 1.0 initial release

The **EagleView Imagery for Experience Builder** integrates your imagery into Esri's Experience builder using a custom widget, giving you the ability to view and analyze orthogonal and oblique images in a separate viewing window. You can also sync our map to any map within the Experience builder app that you build.

Installation notes

For your convenience, see the *Eagleview Imagery for Experience Builder User Guide PDF* that provides full instructions for installing and publishing the widget.

Summary of features

Here is what you can do with this product:
- Install a custom widget within Experience Builder (developer edition)
- View and analyze your imagery
- Measure and annotate within the widget
- Add an API key to gain access to your organization's imagery and layers within the widget
- Set a starting location for the widget
- Sync the widget to any other map within Experience builder
- Publish the custom widget either locally or with an Esri Enterprise Server
